DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 8 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Quilter (USP 4321554).

As to claim 1, Quilter discloses in figure 5 a circuit comprising: a diode (51) having a first terminal connected to a soft-start reset terminal of an integrated circuit; a voltage divider (42, 43) coupled between a voltage reference and a common terminal for the integrated circuit, the diode having a second terminal coupled to a tap of the voltage divider; and a soft-start capacitor (48) coupled between the second terminal of the diode and the common terminal; whereby upon power startup of the integrated circuit, the soft-start capacitor is charged by the tap of the voltage divider and wherein in the event of a single event upset condition, when the soft-start reset terminal of the integrated circuit is reduced to a level at or near the level of the common terminal of the integrated circuit, the diode prevents the soft-start capacitor from discharging through the integrated circuit. It should be noted that the limitation “for use with a pulse width modulated integrated circuit having a soft-start reset function” is seen as an intended use limitation.

As to claim 8, figure 5 shows that the voltage divider comprises a resistor divider circuit.

Art Unit: 2816

As to claim 9, figure 5 shows that the diode is polarized such that the first terminal is the anode and the second terminal is the cathode.

Allowable Subject Matter

3. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 2-5 would be allowable because the prior art fail to teach or suggest an external fault detection and shutdown triggered circuit coupled across the soft-start capacitor for discharging the capacitor.

Claims 6 and 7 would be allowable because the prior art fails to teach or suggest a semiconductor switch coupled between the common terminal and the soft-start reset terminal.
